

Pariser Modelle zur Grundlegung einer ontischen Kategorientheorie XXXIX

1. Meine „Grammatik der Stadt Paris“, erschienen als Publikation des von mir seit 2001 geleiteten „Semiotisch-Technischen Laboratoriums“ (Toth 2016a), stellte in 2 Bänden auf insgesamt 507 Seiten zum ersten Mal eine Grammatik dar, deren Elemente nicht Laute, Silben, Wörter und Sätze (sowie allenfalls Texte), sondern Häuser, Straßen, Plätze und Einfriedungen und deren Materialien nicht Phoneme oder Grapheme, sondern Stein, Holz, Glas u.a. sind. Es handelt sich dabei jedoch keineswegs um die satzsaftig bekannte und unwissenschaftliche strukturalistische (sowie mittlerweile längst überholte) Vorstellung des „Lesens einer Stadt“ bzw. der „Stadt als Text“, sondern um eine funktionale bzw. abbildungstheoretische Beschreibung einer Stadt, basierend auf invarianten ontischen Eigenschaften (vgl. Toth 2013) sowie auf invarianten ontischen Relationen (vgl. Toth 2016b). Die im folgenden verwendeten Zeichen für Morphismen, Operatoren usw. sind in den referierten Arbeiten definiert. Für alle in den „Pariser Modellen“ vorausgesetzten theoretischen Grundlagen sei auf Toth (2017) verwiesen.

2. Das vollständige System funktionaler ontischer Morphismen

2.1. C-Morphismen

2.1.1. $\alpha_C = f(S^*)$

$$\begin{aligned}(\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(S) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(U) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(E)\end{aligned}$$

2.1.2. $\alpha_C = f(B)$

$$\begin{aligned}(\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Sys}) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Abb}) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Rep})\end{aligned}$$

2.1.3. $\alpha_C = f(R^*)$

$$\begin{aligned}(\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Ad}) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Adj}) \\ (\alpha_C = (X_\lambda \rightarrow Y_Z)) &= f(\text{Ex})\end{aligned}$$

2.1.4. $\beta_C = f(S^*)$

$$\begin{aligned}(\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(S) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(U) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(E)\end{aligned}$$

2.1.5. $\beta_C = f(B)$

$$\begin{aligned}(\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Sys}) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Abb}) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Rep})\end{aligned}$$

2.1.6. $\beta_C = f(R^*)$

$$\begin{aligned}(\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Ad}) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Adj}) \\ (\beta_C = (Y_Z \rightarrow Z_\rho)) &= f(\text{Ex})\end{aligned}$$

2.1.7. $\beta\alpha_C = f(S^*)$

$$\begin{aligned}(\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(S) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(U) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(E)\end{aligned}$$

2.1.8. $\beta\alpha_C = f(B)$

$$\begin{aligned}(\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Sys}) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Abb}) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Rep})\end{aligned}$$

2.1.9. $\beta\alpha_C = f(R^*)$

$$\begin{aligned}(\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Ad}) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Adj}) \\ (\beta\alpha_C = (X_\lambda \rightarrow Z_\rho)) &= f(\text{Ex})\end{aligned}$$

2.1.10. $\alpha^\circ_C = f(S^*)$

$$\begin{aligned}(\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(S) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(U) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(E)\end{aligned}$$

2.1.11. $\alpha^\circ_C = f(B)$

$$\begin{aligned}(\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Sys}) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Abb}) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Rep})\end{aligned}$$

2.1.12. $\alpha^\circ_C = f(R^*)$

$$\begin{aligned}(\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Ad}) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Adj}) \\ (\alpha^\circ_C = (Y_Z \rightarrow X_\lambda)) &= f(\text{Ex})\end{aligned}$$

2.1.13. $\beta^\circ_C = f(S^*)$

$$\begin{aligned}
