

**Prof. Dr. Alfred Toth**

## **Die Substituierbarkeit von Subzeichen in Repräsentationsklassen durch semiotische Funktionen**

1. Gemäss Toth (2008c, S. 7 ff.) lässt sich eine abstrakte polykontextural-semiotische tetradisch-relationale Repräsentationsklasse, bestehend aus Zeichenklasse und dualer Realitäts-ematik, wie folgt notieren

$$\text{PDS} = ((((.0.), (.1.)), (.2.)), (.3.)) \times ((((.3.), ((.2.), ((.1.), (.0.)))).$$

Während nun eine logische 4-stellige Relation 6 2-stellige, 4 3-stellige und 1 4-stellige Partialrelation enthält (gemäss den Newtonschen Binominalkoeffizienten), enthält eine semiotische 4-stellige Relation die folgenden  $4 + 15 + 24 + 24 = 67$  Partialrelationen:

monadische Partialrelationen:  $(.0.), (.1.), (.2.), (.3.)$ .

dyadische Partialrelationen:  $(0.1), (0.2), (0.3), (1.0), (2.0), (3.0), (1.1), (1.2), (1.3), (2.1), (2.2), (2.3), (3.1), (3.2), (3.3)$ .

triadische Partialrelationen:  $(0., 2., 1.), (0., 1., 2.), (1., 2., 0.), (1., 0., 2.), (2., 1., 0.), (2., 0., 1.), (3., 2., 1.), (3., 1., 2.), (2., 3., 1.), (2., 1., 3.), (1., 3., 2.), (1., 2., 3.), (0., 3., 2.), (0., 2., 3.), (2., 3., 0.), (2., 0., 3.), (3., 2., 0.), (3., 0., 2.), (0., 3., 1.), (0., 1., 3.), (1., 3., 0.), (1., 0., 3.), (3., 1., 0.), (3., 0., 1.)$ .

tetradische Partialrelationen:  $(3., 2., 1., 0.), (2., 3., 1., 0.), (2., 1., 3., 0.), (1., 2., 3., 0.), (3., 1., 2., 0.), (1., 3., 2., 0.), (2., 3., 0., 1.), (3., 2., 0., 1.), (2., 1., 0., 3.), (1., 2., 0., 3.), (3., 1., 0., 2.), (1., 3., 0., 2.), (2., 0., 3., 1.), (3., 0., 2., 1.), (2., 0., 1., 3.), (1., 0., 2., 3.), (3., 0., 1., 2.), (1., 0., 3., 2.), (0., 2., 3., 1.), (0., 3., 2., 1.), (0., 1., 2., 3.), (0., 2., 1., 3.), (0., 3., 1., 2.), (0., 1., 3., 2.)$ .

Die drei dyadischen Relationen  $(0.1)$ ,  $(0.2)$  und  $(0.3)$  treten allerdings ausschliesslich in Realitätsthematiken auf. In einer polykontexturalen Semiotik, in der die Grenze zwischen Zeichen und Objekt aufgehoben ist, sind also sämtliche Partialrelationen miteinander austauschbar. Während dies für die oben aufgeführten monadischen, dyadischen, triadischen und tetradischen Partialrelationen untereinander ohne weiteres einsichtig ist, zeigen wir in der vorliegenden Arbeit die Ersetzung der dyadischen Subzeichen polykontexturaler Zeichenklassen und Realitätsthematiken durch triadische monokontexturale Voll- und triadische polykontexturale Partialrelationen mit Hilfe der in Toth (2008d) eingeführten semiotischen Funktionen. Durch diese Substitutionen wird eine enorme Menge von semiotischen Verbindungen zwischen Zeichenklassen sichtbar gemacht, die bis anhin unzugänglich blieben (vgl. Toth 2008a, S. 28 ff.) und damit natürlich auch ein Teil jenes unsichtbaren "semiotic web", in das sämtliche kommunikativen, kreativen und repräsentativen Prozesse eingebunden sind.

Man kann sich leicht vorstellen, welche astronomische semiotische Komplexität entsteht, wenn nur schon zwei der fünfzehn polykontexturalen Repräsentationssysteme miteinander in Verbindung gesetzt werden. Ein vergleichsweise simples Beispiel findet man im 2. Teil von Toth (2008b, S. 143 ff.). Angesichts der enormen Komplexität dieser kleinen Ausschnitte aus dem “semiotic web”, das natürlich durch jede kommunikative, kreative und repräsentative Handlung in einem Teil ihres Netzes aktiviert wird, wird man an Kafkas Diktum erinnert, dass man eigentlich tot zusammenbrechen müsste, würde man nur imstande sein, die ganze auf einen einströmende Information zu apperzipieren, sobald man nur einen Schritt vor seine Haustüre setzt.
