

Prof. Dr. Alfred Toth

## Thematische Sandwiches im Rahmen der situationstheoretischen Semiotik

1. Nach Bense „ist unter der semiotischen Situation oder Zeichensituation die Trennung bzw. Unterscheidung zweier äußerer Umgebungen zu verstehen, die als Differenz  $\Delta$  gekennzeichnet werden kann:

Sitz =  $\Delta(U_1, U_2)$ “ (Walther 1979, S. 130)

Später ergänzte Bense: „Jedes Zeichen (...) besitzt die charakteristische Eigenschaft bzw. die Funktion, einen gewissen Situationszustand (Sz), in den es zufällig oder plangemäß eintritt oder eingebracht wird, wie eine 'Störung' zu verändern bzw. einen neuen Situationszustand (Sz') hervorzurufen. Ein Zeichen kann somit auch als Ausdruck der Differenz zweier (zeichenabhängiger) Situationen

ZR:  $\Delta_Z(Sz, Sz')$

aufgefaßt werden“ (Bense 1983, S. 156).

Daraus folgt (vgl. Toth 2025a)

$ZR = \Delta(\Delta(U_i, U_j), \Delta(U_k, U_l))$ ,

d.h. die Zeichenrelation ist eine Differenz der Differenzen paarweiser Umgebungen.

Definiert man die Situation als Rand, können R, linke ( $U^l$ ) und rechte Umgebungen ( $U^r$ ) alle Zeichenfunktionen einnehmen (vgl. Toth 2025b). Die vermittelnde Kategorie der Zeichenrelation (vgl. Toth 2025c) innerhalb der nicht-verschränkten Zeichenrelation fungiert dann als Operator: „Innerhalb dieser semiotischen Situationsrelation fungiert (...) das Zeichen als Operator, d.h. als situationswirksames Zeichen. Es kann Realisator, Transformator, Rezeptor und Effektor sein“ (Bense 1971, S. 86).

2. Im folgenden analysieren wir mit Hilfe der systemtheoretischen Semiotik die sechs Dualsysteme mit den strukturellen Realitäten von Sandwiches.

2.1.  $(3.1, 2.2, 1.1) \times (\underline{1.1}, 2.2, \underline{1.3})$

Zeichenklassen
