

Trajektogramme

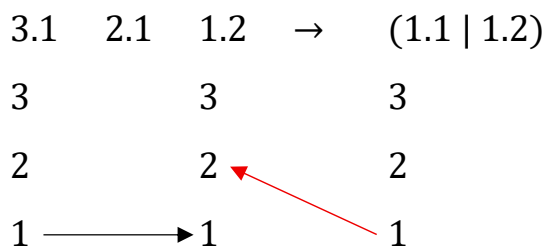

1. In Toth (2025a) wurden erstmals die 10 Zeichenklassen auf trajektische Dyaden abgebildet. Diese sind eine maximal redundanzarme und relationsverkleinernde Repräsentation semiotischer Relationen. In Toth (2025b) wurde zudem gezeigt, daß man auch die strukturellen Realitäten bijektiv auf trajektische Dyaden abbilden kann.

2. Im folgenden führen wir eine graphische Darstellung trajektischer Dyaden ein, die an das allgemeine Modell trajektischer Relationen (vgl. Toth 2025c) angelehnt ist. Diese Graphen trajektischer dyadischer Relationen nennen wir kurz Trajektogramme. Aus Gründen der Übersichtlichkeit beschränken wir uns im folgenden auf Zeichenklassen.
